Storz Modulith® SLX-F2 Portable Lithotripsy System

Ideal for custom treatment strategies in which high pressure and energy concentration are necessary.

The Storz Modulith® SLX-F2 is designed for the treatment of renal and ureteral calculi using extracorporeal shock wave lithotripsy (ESWL).

Using the Modulith SLX-F2, it is possible to have a customizable treatment option based on your patient needs and anatomical conditions. High pressure and precise energy concentration are often necessary in the disintegration of ureteral stones, whereas lower pressures and a wider focal zone can be effectively used for larger stones located in the kidney.

Versatility for Custom Treatment
Since no two stones or anatomies are the same, the SLX-F2 dual focus design provides a highly adaptable shock wave parameter for a completely customizable treatment. The dual focus allows you to customize a treatment strategy that best suites your patient’s needs.

Low Side Effects
The effective and efficient cylindrical shock source of the Modulith SLX-F2 provides unsurpassed fragmentation efficiency with low side effects and a focal depth of 165 mm.

Ergonomic Table Design
The patient table is equipped as a fully functioning urological work station, providing movement in all directions, and trendelenburg positioning. The user-friendly design allows the equipment to remain constant in the room even for right, left, and bilateral treatment.

Additional Key Benefits
• In-line x-ray and ultrasound localization for straightforward targeting
• Fixed patient orientation regardless of stone position in left or right kidney
• High-quality GE/OEC imaging
• Complete urological work station including stirrups and cystoscopy set-up
• 500 lb table limit
The ForTec Advantage
As a leader in the delivery of innovative extracorporeal shock wave lithotripsy (ESWL) technology, ForTec works in close collaboration with physicians and other healthcare professionals in a partnership that benefits patients and medical facilities.

On-site Professional Technician Support
A ForTec x-ray technician assists with all procedures, working side-by-side with your staff to ensure proper room set-up and safe equipment operation in accordance with manufacturers’ recommended guidelines.

Comprehensive Staff Training
Passionate about delivering a level of service that leads to exceptional patient outcomes, ForTec provides training to ensure that your staff and physicians are comfortable, enabling the best experience for patients.
