

DAY BEFORE CASES

1

fortec technician delivers the laser

Our ForTec technician and CATALYS[®] laser arrive at your facility and the technician unloads the laser

2

catalys[®] laser install

Our ForTec technician installs the CATALYS[®] laser in your procedure room or operating room

3

laser calibration

Once the technician installs the laser, they will then calibrate the laser to prepare for the next day's cases

DAY OF CASES

4

technician arrives 90 minutes prior to start of cases

Upon arrival, our technician will enter all the treatment plans for the day's cases. The technician will also bring all needed liquid optics interfaces (LOIs) needed for the day

5

technician supports surgeon

During the cases, your ForTec technician will operate the CATALYS[®] and assist the surgeon, helping your day run efficiently

AFTER CASES

6

laser removed from facility

On completion of all cases, the ForTec technician removes the laser safely from your facility

on to the next cases
